

Patient Detail:

Laiba Liaqat

Age/Sex :

25 (Y) / F

Registration Location:

Near Jinnah Hospital, Lahore

Registration Date:

04-Jun-2026 20:45

Reference:

Radiology OOC Discount

Consultant:

Dr. Bushra Liaqat

Patient Number:

1001-25-17808346

Case Number:

17242-04-06

Note : ...

Department of Radiology

Reporting DateTime: 04-Jun-2026 22:05

Abdominal Pelvis Ultrasound

Liver measures 127 mm in the mid clavicular line (Normal upto 160 mm), and shows normal echotexture with smooth contours. No focal lesion. Intra hepatic biliary channels are not dilated.

Portal vein measures 9 mm and is patent. **CBD** is not dilated.

Gall Bladder wall is of normal thickness. No stone or sludge. No mass seen.

Pancreas is normal in size, echotexture and outline in its visualized portion.

Spleen measures 80 mm (normal <120 mm). No mass seen.

Rt. Kidney	93 x 32 mm	Cortical thickness measures 12 mm
Lt. Kidney	91 x 41 mm	Cortical thickness measures 13 mm

Renal outlines are smooth. Normal cortico-medullary demarcation.

Right kidney shows a calculus at upper pole measuring 4 mm and at interpolar region measuring 4.2 mm. No mass or hydronephrosis.

Left kidney shows 2-3 calculi at lower pole, largest measuring 4.4 mm. No mass or hydronephrosis.

Urinary Bladder wall is of normal thickness. No stone or mass seen.

No abdominal mass or enlarged lymph nodes seen. **Minimal interloop fluid in right iliac fossa.**

No basal pleural effusion seen.

Anteverted uterus	67 x 29 x 38 mm	with normal contour and endometrium measures 6 mm.
Lt. Ovary	47 x 18 mm	Volume: 18 ml

Right ovary could not be visualized. (H/O surgery).

Minimal fluid also noted in the vicinity of left ovary. A collapsed follicle also noted in left ovary.

Left ovary shows polycystic appearance with 14-16 peripherally arranged follicles (all < 8 mm) and central abundant medulla.

No adnexal mass or cyst seen. No free fluid in culde sac.

IMPRESSION	Bilateral renal calculi. Bulky polycystic left ovary with a collapsed follicle. Minimal fluid in the pelvis extending into right iliac fossa.
SUGGESTION	Right ovary not visualized---MRI pelvis suggested.

This interpretation is based on available information. Correlation with clinical assessment, previous imaging and laboratory investigations is suggested. The study can be reviewed in case of any clinical query.
